Worksite Solutions

Water Systems

WE KEEP YOUR
WORKSITE FLOWING

KLX Energy Services

Hydrate. Irrigate. Wash. Flush. Repeat. From a steady stream of fresh water to reclaimed site water for nonpotable uses, nobody beats KLX water systems.

Good Hydrations in the Field

On outdoor worksites, it's especially important to stay hydrated. In addition to supplying water to all worksite buildings, the KLX freshwater system is like a thirst-quenching, ice-dispensing beacon for hardworking crews.

Instant access on the worksite:

- Fresh drinking water – always on tap
- 300 lb ice per day – available at the push of a button

Freshwater Systems

Reliable, instant access to fresh water is a necessity in crew quarters and other worksite buildings. Even with its small footprint, one mobile drinking water plant can process and supply up to 6,000 gallons of pure, drinkable water per day.

Our fully automated microfiltration system achieves superior purity using our exclusive technology – manufactured in-house to KLX's precise specifications at our Carthage, TX facility. They're equipped to provide UV treatment and multistage filtration to ensure unsurpassed quality for every drop of water that flows into an on-site facility.

KLX freshwater systems:

- Eliminate the need for freshwater delivery
- Enable adjustable water pressure from 0 to 85psi
- Include 1,000 gallons of on-site reserve storage
- Adhere strictly to state drinking water guidelines
- Are remotely monitored 24/7 to ensure uninterrupted supply
- Avoid waste by providing pressure and flow alerts with auto stop

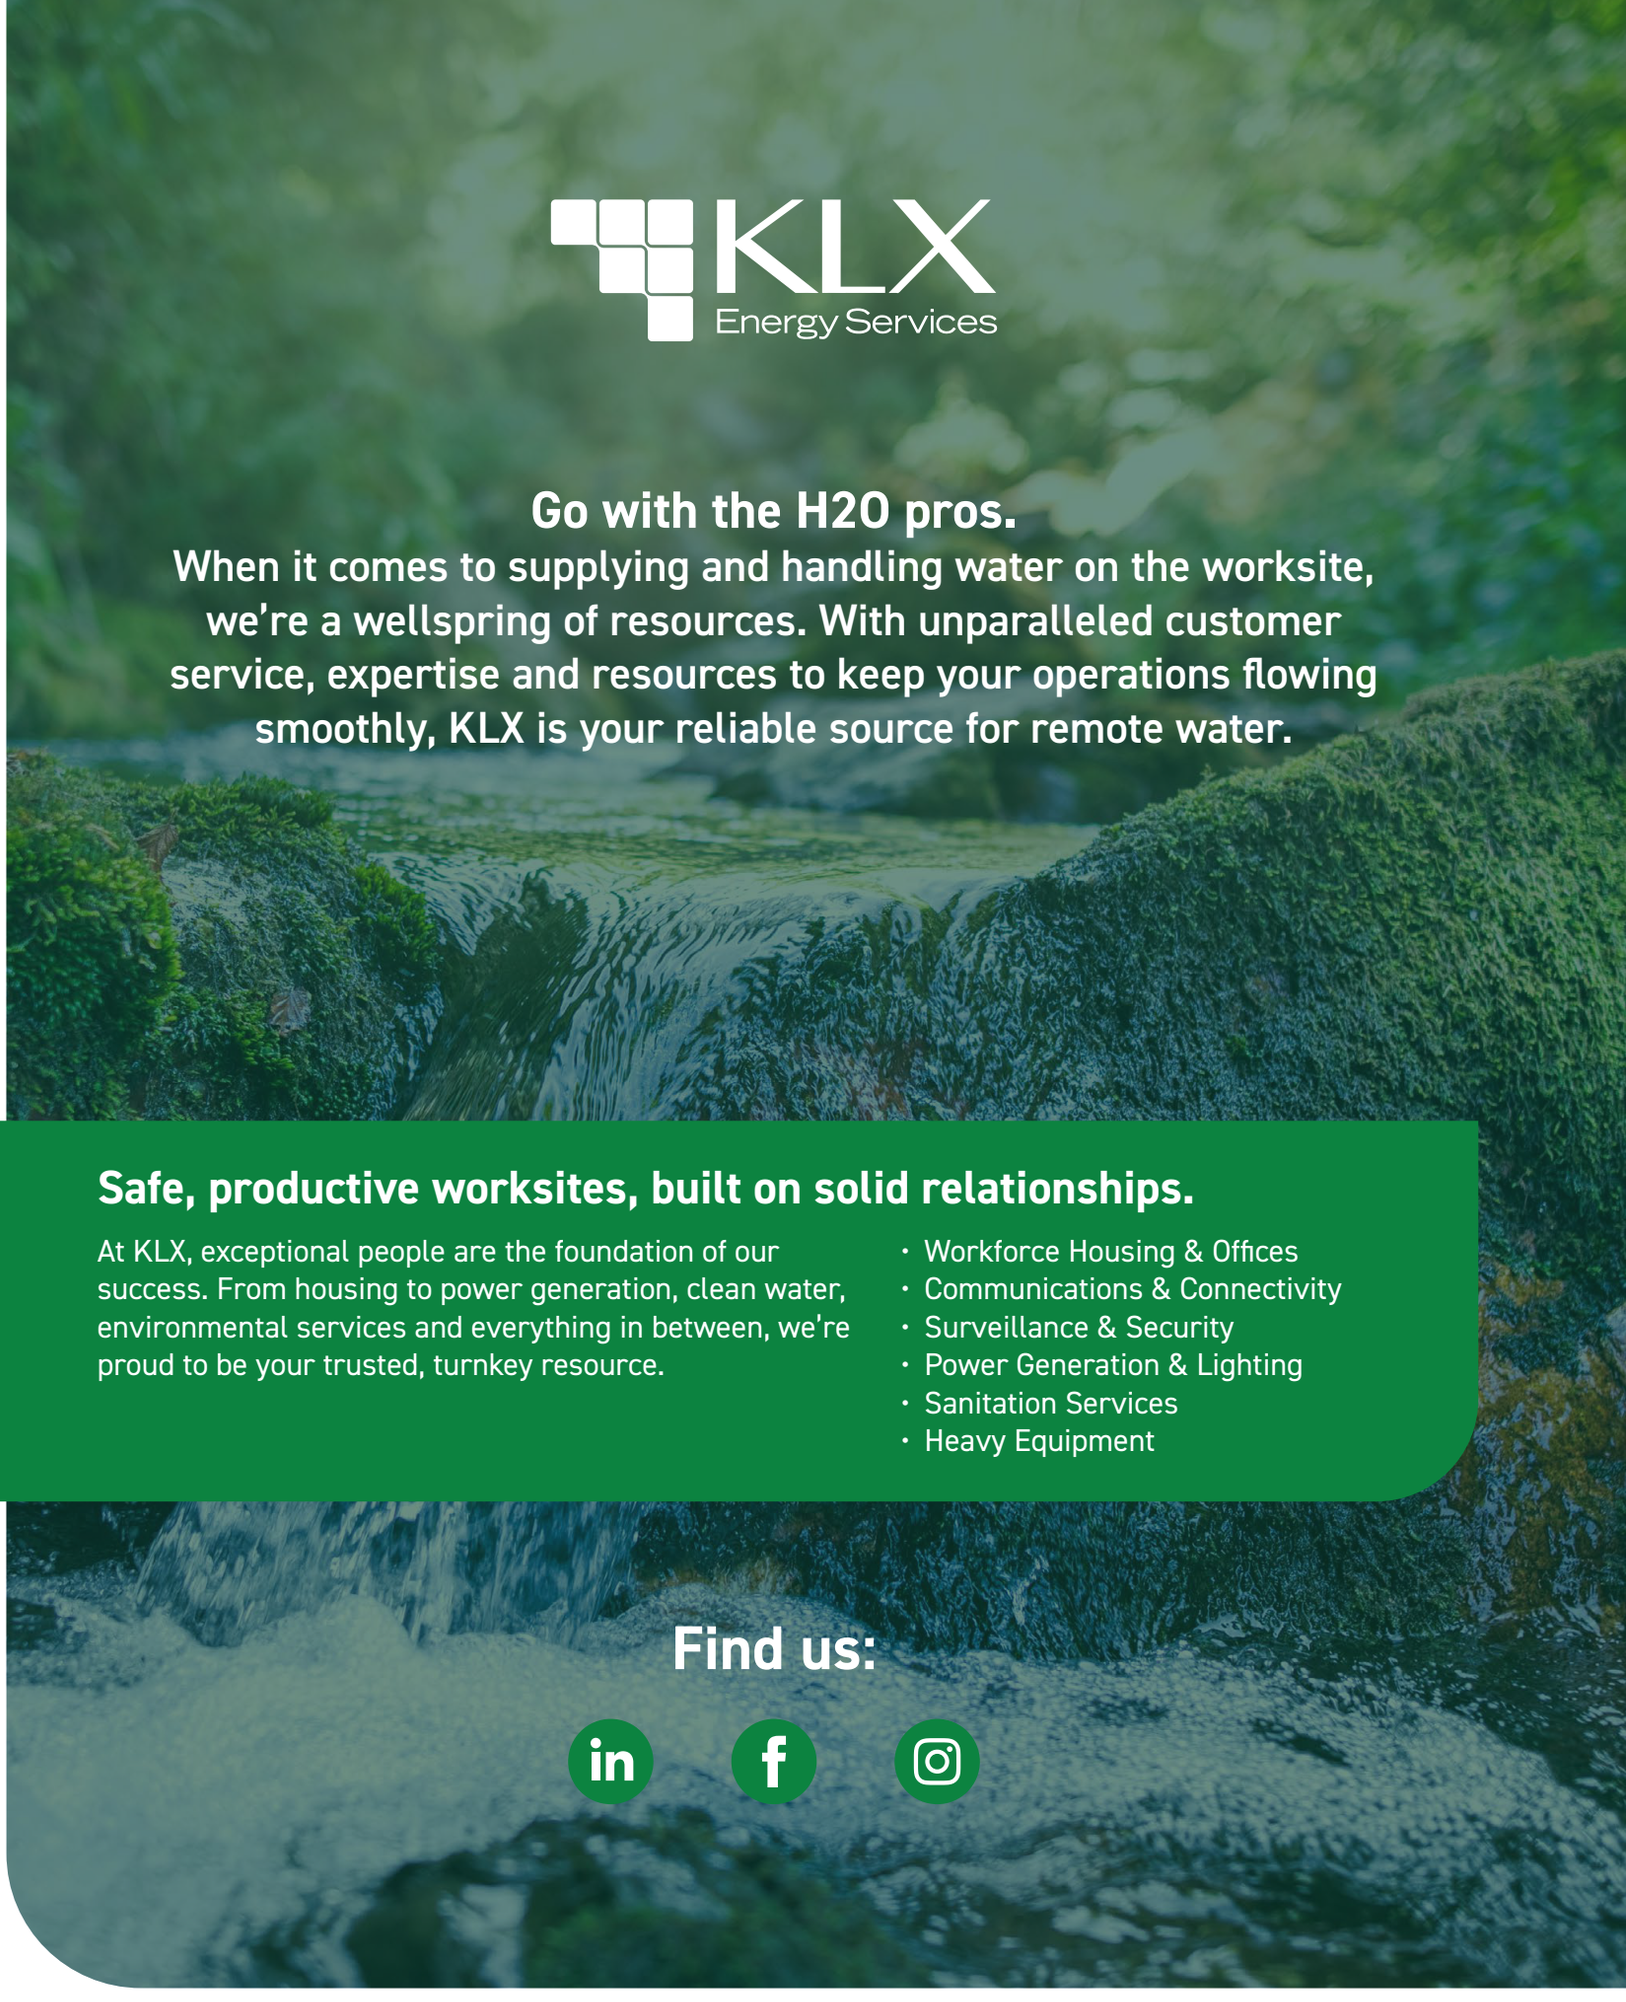

Water Reclamation and Recycling

With KLX, you won't have to clutter your worksite with the tons of trucks needed to store, transport and dispose of raw wastewater. Also built by KLX pros at our Carthage location, our wastewater-recycling units give you a sustainable, cost-effective way to recycle and repurpose the water used by your crew.

Our automated recycling system:

- Collects and consolidates all crew-quarters drainage
- Processes waste water in our proprietary, mobile filtering/treatment plant
- Pumps the processed, nonpotable water to a wellsite pit or storage tank
- Recovers valuable water resources for fracturing operations, irrigation, dust control and more

KLX Energy Services

Go with the H2O pros.

When it comes to supplying and handling water on the worksite, we're a wellspring of resources. With unparalleled customer service, expertise and resources to keep your operations flowing smoothly, KLX is your reliable source for remote water.

Safe, productive worksites, built on solid relationships.

At KLX, exceptional people are the foundation of our success. From housing to power generation, clean water, environmental services and everything in between, we're proud to be your trusted, turnkey resource.

- Workforce Housing & Offices
- Communications & Connectivity
- Surveillance & Security
